

Alesta® Alu QualiPrime

Extended life in C5M environment

This Qualicoat approved zinc free primer is the perfect solution for aluminum.

The perfect primer for corrosion protection before topcoat application. The key application areas for the product are in the construction market, including facades, verandas and all other aluminium components which require the maximum weather protection which is possible with a powder coated product.

There are an increasing number of requests from the market for an improved resistance to corrosion to enable an increased service life of the coated objects.

The requirements for increased corrosion resistance are especially relevant near to coastal areas and in aggressive environments.

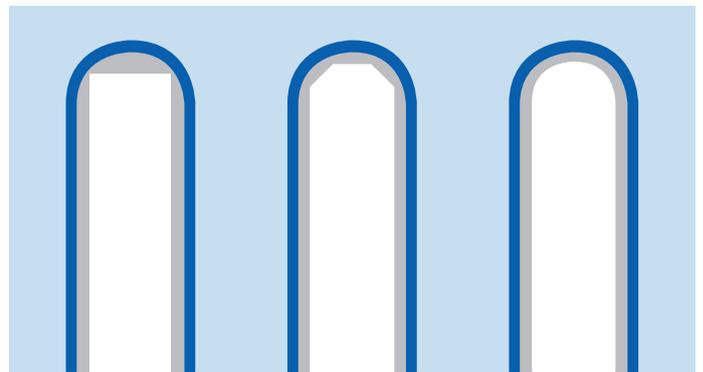

Alesta® Alu QualiPrime is the result of many years of research in the laboratories of Axalta. Thanks to its specific characteristics of viscosity and reactivity, Alesta® Alu QualiPrime enhances significantly the coverage of sharp edges, improves the impermeability of the coating and the protection against the corrosion.

The Alesta® Alu QualiPrime is certified by Qualicoat.

Benefits of the Alesta® Alu QualiPrime:

- Easy to use, high productivity
- High mileage, cost effective
- Good penetration in faraday cage areas
- Perfect edge covering
- Enhanced protection against corrosion
- Low temperature curing window, energy savings
- Compatible with standard powder coatings

The Alesta® Alu QualiPrime is available from stock in medium grey colour, other colours are available on request with a short lead time.
